

The key to ensuring your Warman® centrifugal slurry pump is maintained to the best possible standard is an automatic Accumin® lubricator. Accumin® lubricators automatically deliver even, measured lubricant to the vital points of your Warman® pump. This results in enhanced availability and durability.

Accumin® lubricators are designed to ensure the correct lubricant dosage is safely applied on a consistent basis. This reduces the need for manual labour and helps to prevent unplanned downtime.

In addition to Warman® pumps, the Accumin® lubrication system is also available for use on valves. It is ideal for use on Isogate® knifegate valves to ensure consistent and even lubrication of the gate. The Accumin® system can also be used for the lubrication of mechanical seals and it is suitable for most grease-lubricated rotating equipment.

Our Accumin® lubricators are designed to:

- Improve pump and valve reliability
- Help prevent unplanned downtime and reduce maintenance costs
- Reduce demand on manual labour
- Increase personnel safety by reducing the time spent in hard-to-access and potentially dangerous areas

Features

- Cutting-edge technology
- Consistent, measured lubricant amount automatically delivered to vital points of equipment
- Ideal for use on Warman® pumps, Isogate® knifegate valves, mechanical seals, and is also suitable for most grease-lubricated rotating equipment such as Multiflo®, Hazleton®, Lewis® and GEHO® pumps and Aspir™ centrifuges

Sizes/Availability

Accumin® automatic lubricators come in four sizes and two drive configurations, ensuring they are ideal for use in a variety of situations.
